I have the data for the cooling wells. I need the potable wells.

I should have also asked which wells you need the run time data for. Is it all registered wells on the plant site, or just our potable wells?

Just to give you a heads up, I believe the data will be fairly limited for the potable wells, but we will put together what we can.

From 2001 through present would be ideal, last 5 years if it is more accessible.

What timeframe do you need?

Doug and Terry,

I am again working with the Twin Platte NRD on certifying the plant wells at GGS. Do we have any records that show the amount of time that the wells were run? This could include hour meters, electrical records, or anything else.

Thanks,

Jeff
